

WHY USE CBD AND CBG PRODUCTS?

1

NATURAL PAIN RELIEF

CBD and CBG interact with a set of receptors in your body to intercept and block pain signals being sent to your brain, helping to bring relief. CBD and CBG are both powerful anti-inflammatories which reduce the levels of pro-inflammatory cytokines. Many chronic pain conditions are caused by inflammation and CBD and CBG can be beneficial.

2

CBD AND CBG WORK BETTER TOGETHER

Researchers have found that cannabinoids when used together create an entourage effect which is beneficial in reducing pain and inflammation. A larger array of receptors will be activated and the results are more powerful.

3

WHY DO MILLIGRAMS MATTER?

If you use products without enough milligrams, you won't feel the effects. Stronger milligram products increase relief and the effects last longer.

4

WHAT IS CBG?

CBG stands for Cannabigerol. It is another cannabinoid from the hemp plant. The way CBG interacts with our endocannabinoid system is different from CBD (Cannabidiol) but together they work better to cover more receptors in your body to help reduce inflammation.

5

WHY USE SUSAN'S CBD?

Milligrams Matter! Susan's CBD products contain some of the highest milligrams of CBD and CBG on the market. Our products will bring you relief that is stronger and lasts longer. We infuse our base oils with dried chamomile and calendula flowers to add healing terpenes into our products. Handcrafted in Colorado because we care about you!
